

#### **Button detection**

## 1. Learning target

In this course, we will earn how to use Micro:bit and button module to read button status.

## 2. Preparation

Connect the module to Micro:bit board by expansion board, as shown below.

# 3. Programming method

**Mode 1 online programming:** First, we need to connect the micro:bit to the computer by USB cable. The computer will pop up a USB flash drive and click on the URL in the USB flash drive: <a href="http://microbit.org/">http://microbit.org/</a> to enter the programming interface. Add the Yahboom package <a href="https://github.com/YahboomTechnology/Module-World">https://github.com/YahboomTechnology/Module-World</a> to program.

**Mode 2 offline programming:** We need to open the offline programming software. After the installation is complete, enter the programming interface, click \( \bigcup \) New Project \( \bigcup \) , add Yahboom package:

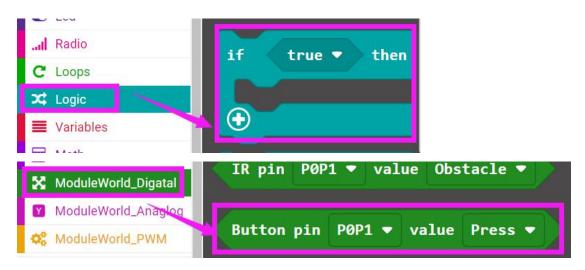

https://github.com/YahboomTechnology/Module-World, you can start programming.

## 4.Looking for blocks

The following is the location of the building blocks required for this programming.

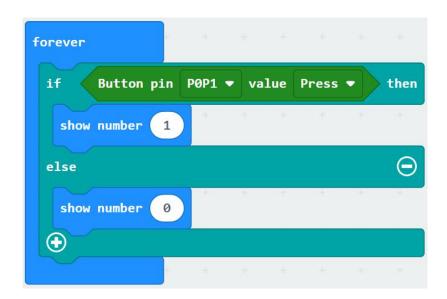

## 5.Combine block

The summary program is shown below.

# 6. Experimental phenomena

After the program is downloaded successfully. When we press button, Micro:bit dot matrix will display 1, otherwise Micro:bit dot matrix will display 0.
